

FT5000

A high-volume, reliable through-the-wall ATM you can afford.

For years, the ATM industry has trusted Triton for innovative technology that's practical and cost-efficient, and Triton delivers again with the FT5000, a versatile through-the-wall ATM that offers high performance for a surprisingly low investment.

Our extensive experience in producing innovative, high quality cash dispensing machines has led us to develop this product focused on the high-end retail and financial institution market.

What makes the Triton FT5000 most popular with retailers, banks and credit unions is its highly cost-efficient operation. The FT5000 can be placed in a drive-up or walk-up configuration with

two to four cassettes based on transaction volumes. You can count on the reliable operation that has made Triton a leader in the industry.

Powered by Triton Dynamic Language (TDL), our ATMs communicate with the host via a protocol widely accepted as the de facto industry standard. Certified by virtually every processor, the TDL platform is the backbone which supports faster processing, feature rich software functionality such as Remote Key Transport (RKT), and smart controls that allow interactive customization via text rather than static screens.

Performance. Reliability. Easy and inexpensive to service. There's finally a through-the-wall unit made just for you.
